Profile

Australian, based in Tokyo, full-stack engineer with three years of experience in B2B SaaS, working directly with enterprise clients from scoping through delivery. Comfortable across the stack in React, TypeScript, and Node.js, with particular depth in frontend architecture, developer tooling and observability.

Skills

Languages	English (native), Japanese (conversational)
Programming	TypeScript, JavaScript, Java
Frameworks and Libraries	React, Next.js, Node.js, NestJS, Socket.IO, Vitest, Jest, Playwright
Tools and Platforms	AWS, Storybook, Sentry, Docker, GitHub Actions, Vite, Webpack, Supabase
AI Tooling	Claude Code, Codex, Cursor

Experience

Liferay — *Tokyo, Japan*

Software Engineer (Solutions) — *March 2025 – Present*

- Working directly with clients to translate requirements into technical solutions while balancing trade-offs between performance, maintainability, and scalability for a highly customised B2B SaaS platform (React, TypeScript) serving tens of thousands of users.
- Overhauled project-wide TypeScript and ESLint configurations, establishing stricter engineering standards that improved code consistency and reliability when using AI-assisted development tools.
- Replaced a tightly coupled component system with composable primitives and documented them in Storybook, enabling multiple applications to share a consistent branded experience while reducing duplicated UI development.
- Re-architected an in-browser report generation service as a message-queue-backed backend microservice, offloading resource-intensive processing from the frontend to improve report generation performance and prevent large reports from blocking the UI.
- Built a vendor-agnostic observability library exposing a common interface for error reporting, enabling applications to integrate with monitoring services such as Sentry and eliminating vendor lock-in.
- Mentored junior engineers through pair programming, code reviews, and technical walkthroughs; leveraged this experience to overhaul the Software Engineering Trainee Program, enabling new graduates to ship customer-facing features independently within weeks.

Associate Software Engineer (Solutions) — *July 2024 – March 2025*

- Migrated frontend build tooling from Webpack to Vite and optimised dependency management, reducing build times by 90% and improving page-load performance through leaner bundles.
- Introduced unit and E2E testing with Jest, React Testing Library, and Playwright, standardising test practices through a shared testing utility framework and increasing overall coverage by 10%.

Software Engineering Trainee — *January 2024 – July 2024*

- Shipped production code across multiple client projects from the outset while mentoring fellow trainees through technical presentations and one-on-one support.

Babcock — *Adelaide, Australia*

Mechanical Engineer — *2020 – 2022*

- Investigated and rectified defects in submarine systems, managing each case from root-cause analysis to an agreed way forward, coordinating engineering and trades teams through to customer testing and acceptance.

Projects

Another Hands — *Tokyo, JP*

Real-time Multiplayer Blackjack

- Designed an authoritative server architecture with centralised game state, using WebSockets for real-time bidirectional state synchronisation between clients.
- Modelled game flow as a state machine with event sourcing, persisting every action as an immutable event stream to enable deterministic replay and full auditability.
- Deployed a containerised application on AWS using EC2 and Route 53, with Caddy handling TLS termination and reverse proxying.
- Integrated Amazon RDS as a managed relational database for persistent game data, separating durable storage from the application infrastructure.

Education

University of Melbourne *Melbourne, Australia*

Graduate Diploma in Computer Science *July 2022 - June 2023*

- Weighted Average Mark: 84%

University of Adelaide *Adelaide, Australia*

Bachelor of Engineering (Honours) - Mechanical *March 2014 - December 2019*

- First Class Honours (GPA: 6.5/7)
- Exchange year at Nagoya University, Japan (2016 – 2017)
